

Meridian Clearing Services Ltd - Information Security Overview

Security Governance

Meridian takes information security extremely seriously and maintains a comprehensive security posture aligned to industry best practice.

Security is overseen by the Head of Technology. There is no dedicated information security officer.

The company is not certified to ISO 27001 or any equivalent standard. Certification is a stated objective for 2027.

Technical Controls

Network traffic is encrypted using TLS 1.2 or above. Production databases are not currently encrypted at rest.

Privileged access requires multi-factor authentication. Access reviews are performed annually.

Patching is performed on a monthly cycle for non-critical systems. Critical vulnerabilities are addressed on a best-efforts basis.

Testing and Assurance

A penetration test was performed by an external party in 2023. The report identified four high-severity findings. Remediation status for those findings is not recorded in this document.

No penetration test has been performed since 2023.

Vulnerability scanning is performed quarterly against internet-facing systems.

Incidents

One security incident was recorded in 2025 involving unauthorised access to a staff email account. No client data was assessed as affected. A post-incident review was completed.
